CONDITIONS OF SALE

ALL NURSERY STOCK quoted for sale in this Catalog is of the highest quality.

Our Deciduous Fruit Trees are grown in Placer County, in a decomposed granite soil, which produces an especially fine root system; with many fibrous roots, insuring a quick start and a sturdy growth. This type of soil is generally recognized as being superior for the growing of Nursery Stock.

Our Grapevines are grown in an area where Pierce Disease, Phylloxera and other grape diseases are not known to exist, and may be certified for shipment anywhere.

TERMS:—On orders placed in advance of the time delivery is wanted, we request a deposit of 20%, balance on delivery. If terms are desired, arrangements must be made in advance of delivery of stock.

ALL STOCK IS GUARANTEED to be first class, as represented, and we will be glad to entertain any complaints, if made not later than 30 days from receipt of stock. Prices quoted are f.o.b. Lindsay, where shipment is to be made by common carrier. On commercial size orders we will make **FREE DELIVERY** by our own trucks, within a 75 mile radius of Lindsay.

GUARANTEE:—While we exercise the greatest care to have our stocks true to label, and are ready, on proper proof, to replace free of charge all trees, etc., that may prove untrue, or refund the amount paid, it is mutually understood and agreed between the purchaser and ourselves that our guarantee shall in no case make us liable for any sum greater than that originally received for said trees, etc., that prove untrue.

IT IS FURTHER understood and agreed that orders shall be void, should delivery be prevented or injury befall the stock by reason of flood, drought, frost, quarantine or other causes beyond our control.

FRUIT TREES

FREESTONE PEACHES

On Lovell Peach Root

- **AMES ELBERTA**—Sport of Kim (Early) Elberta; ripens at least two weeks earlier. Good quality yellow flesh. Bears heavy crops, regularly.
- **ALAMAR**—Resembles Rio Oso Gem, but is a thriftier growing tree, with more symmetrical fruit and fewer culls; needs pollenizing. Produces about 50% more fruit than Rio Oso Gem.
- **BABCOCK**—A rather small white-fleshed freestone with a high blush; mild and sweet. Bears heavily, requiring little winter chilling. Early June.
- **BONITA**—Large, round yellow freestone, with red blush, small pit and excellent flavor. Ripens with Elberta. Introduced by Univ. of Calif. at Riverside, and is particularly recommended for near the Coast.
- **CARDINAL**—Originated in Georgia by the U.S.D.A., and introduced by them to California. Yellow flesh; skin red blushed. Another promising early shipping peach. Ripens early June, a few days ahead of Dixiered.
- **DIXIERED**—An early, red blushed, yellow-fleshed freestone, introduced by the U.S.D.A. Shows much promise as an early shipping variety. Ripens early June.
- **EARLY CRAWFORD**—Large, round, yellow-fleshed freestone, blushed red. For home or local market. Mid-July.
- **ELBERTA**—Popular sweet, juicy, yellow-fleshed freestone; for canning, shipping or eating fresh. Mid to late July.
- **FAY ELBERTA**—Good sized, yellow fleshed freestone, highly colored; ripens a few days after Elberta.
- **FLORENCE**—Early white fleshed semi-freestone, good quality for early variety. Local market or home orchard. Early June.
- **GOLDEN JUBILEE**—Yellow fleshed freestone; bears heavily and of good quality for home use. Too soft for shipping. Mid to late June.
- **HALES EARLY**—A good quality, early, white fleshed freestone. Late June.
- **INDIAN FREE**—Large, red fleshed freestone; excellent variety for home use or local market. Skin striped red. August.
- **J. H. HALE**—Large, round, yellow fleshed; yellow skin with red markings. Excellent for shipping and canning. Late July.
- **HALE HAVEN**—This is a large, yellow freestone of good eating quality, being sweet and juicy. A little too tender for shipping, but excellent for the home orchard and local market. Ripens early August.
- **KIM EARLING**—This new early shipping peach originated in Tulare County, and has many good qualities to recommend it. It attains good size, is highly colored and ripens as early as June 6th. It is yellow fleshed and of very good eating quality, yet firm enough for long distance shipping. Practically never develops split pits.
- **KIM (Early) ELBERTA**—Medium sized, yellow fleshed fruit with rich, red cheek. Important commercial shipping variety. Good quality. Heavy bearer. Early June.
- **KRUMMELS OCTOBER**—Good sized, yellow fleshed freestone with red blush. Good quality for late variety. Early October.
- **LINDSAY**—This new yellow fleshed freestone peach, ripening in late September and early October, comes at a time when good eating peaches are scarce. Large size, yellow skin; flesh golden, juicy and richly flavored. Holds well for shipping.

- **MAYFLOWER**—Very early, soft, white fleshed, semi-free-stone; one of the earliest shipping varieties. Late May.
- **MILLER'S LATE**—Large, heavy bearing yellow freestone; one of the few peaches in its season. Mid to late October.
- **NECTAR**—Large, white fleshed freestone; sweet and juicy. White skin with faint blush. Early July.
- **PARADISE**—New white fleshed freestone; scarlet skin, solid flesh and excellent flavor. Very attractive and keeps well for shipping. Mid-July.
- **RIO OSO GEM**—Large, firm, yellow fleshed freestone; richly flavored. Skin shaded dark crimson. Early August.
- **RED HAVEN**—An early yellow freestone of medium size, good color and firm flesh. Good shipping variety. Mid to late June.
- **RUBIDOUX**—Large yellow freestone with red blush, somewhat mottled. A thrifty growing tree. Recently introduced by Univ. of Calif. at Riverside, and particularly recommended for inland areas of Southern Calif. Does well here, also. August.
- **SALWAY**—A large, juicy, yellow fleshed freestone of good quality. Late September.
- **SAUCER**—Medium sized, white fleshed freestone; flat with very small seed. Excellent quality. Early July.
- **STRAWBERRY FREE**—White flesh, turning red near pit. Skin white, shaded red; good home orchard variety. Bears heavily. Early July.
- **VENTURA**—A new Riverside introduction, recommended for Coastal plains of Southern California. Skin yellow with red blush. Flesh yellow and free from the pit. Flavor is subacid and of fairly good quality.

CLINGSTONE PEACHES

On Peach Root

- **GUAME**—Large fruit, clear, yellow flesh. One of the best for canning. Mid-August.
- **HALFORD**—Large, yellow fleshed cling; excellent for canning. Late August.
- **ORANGE**—An excellent, highly flavored home canning variety. Yellow fleshed. Mid-August.
- **PALORA**—Large, round, golden-yellow cling. Firm, sweet, yellow flesh. Early August.
- **PHILLIPS**—Very large, round, yellow cling; highly flavored late canning variety. Early September.
- **SIMS**—Very similar to Phillips. Excellent canning variety. Early September.
- **STRAWBERRY**—Large, white fleshed cling. Fine for home canning. September.
- **TUSCAN**—Earliest of the yellow clings. Ripens Mid-July. Good quality.
- **WHITE HEATH**—Popular home canning variety; white skin with light blush; creamy white flesh. Large size. Late September.

On Marianna & Myrobolan Root

PLUMS

Those starred (*) can be supplied on Peach root, also.

- ***BEAUTY**—Early, important commercial shipping variety; medium sized, crimson skin, amber flesh. Self-fertile and bears heavily. Early June.
- **BECKY SMITH**—Large, round, firm and red. A good late commercial variety or for home use. Good keeper. September. Climax and Santa Rosa for pollenizer.

- ✓ **BURMOSA**—New university introduction. Ripens about with Beauty. Large size, amber skin with red blush; amber yellow flesh. Stores and ships better than Beauty, also having firmer texture and better eating quality. Requires pollinizer. Santa Rosa, Wickson and Beauty are recommended.
- ✓ **BUTLER (Laroda)**—Another Davis variety. Dark blue skin; yellow flesh. Bears heavily and is an excellent keeper. Early August.
- ✓ **CLIMAX**—Large, heart-shaped, deep red fruit; amber flesh. Sweet and delicious. Excellent for home use, particularly. Self fertile. Mid-June.
- ✓ **DAMSON**—Heavy bearing home variety, excellent for jams, jellies and preserves. Small, dark purple fruit with heavy bloom. August.
- ✓ **DUARTE**—Large, heart-shaped shipping variety. Red skin, blood red flesh. Early July.
- ✓ **ELEPHANT HEART**—A very large freestone, blood red plum of good shipping quality. Pollenize with Red Heart or Santa Rosa. Late July, early August.
- ✓ **GREEN GAGE**—Medium sized, oval shaped with yellowing skin and yellow flesh. Excellent canning variety. August.
- ✓ **HOWARD MIRACLE**—Very large, amber fleshed plum with small pit; skin yellow, overlaid with red. Good flavor. August.
- ✓ **MARIPOSA**—Large, purple-red fruits; blood-red flesh, excellent eating quality; good keeper. Pollenize with Satsuma and Santa Rosa. Late July.
- ✓ **QUEEN ANNE**—Was introduced at Davis. Large, dark red plum, a trifle pointed; yellow fleshed. Tree is a slow grower, moderate producer. Santa Rosa for pollinizer. Early August.
- ✓ **SANTA ROSA**—Leading shipping variety. Large, round, crimson fruit; flesh yellow to dark red near skin. Self fertile. Mid-June.
- ✓ **(LATE) SANTA ROSA**—Large, oval, purplish crimson fruit, similar to Santa Rosa, but ripening one month later. New, improved, non-cracking variety. Early August.
- ✓ **SATSUMA**—Home orchard favorite. Large, round fruit; red skin and rich red flesh. Excellent for canning. Pollenize with Duarte or Santa Rosa. July.
- ✓ **WICKSON**—Large, heart-shaped, greenish yellow to light red fruit; yellow flesh. Shipping variety, and excellent pollinizer. August.

PRUNES

On Marianna Root

- ✓ **FRENCH**—Medium sized, oval, purple skinned, yellow fleshed drying variety; rich and sugary. Used some for fresh shipping also. August.
- ✓ **ITALIAN**—Medium sized, oval, dark purple fruit with blue bloom; flesh greenish-yellow, sweet and juicy.
- ✓ **STANDARD**—Large, oval, deep purple fruit with amber flesh. For drying or shipping. Pollenizer French or Sugar. August.
- ✓ **SUGAR**—Large, round, purple skin and yellow flesh, used for shipping and drying. Self fertile. Late July.

APRICOTS

On Peach, Apricot & Marianna Root

- ✓ **BLenheim**—Medium sized, orange skin, yellow flesh, a regular bearer. Commercial variety. Late June.
- ✓ **MOORPARK**—Large, round, orange-yellow fruits with light blush; bears best in Coastal regions. Early July.

- **NEWCASTLE EARLY**—Earliest variety to ripen; medium sized, round, lemon-yellow skin, yellow flesh. Early June.
- **PERFECTION**—Very large fruit of uniform shape on a hardy tree which bears abundantly. Good flavor, sweet and juicy. Ripens 10 days earlier than Royal.
- **ROYAL**—Leading commercial and home planting variety; medium sized, orange-yellow skin, orange flesh. June.
- **TILTON**—Large, orange-yellow skin, yellow flesh; bears well in the interior; latest to ripen. July.

NECTARINES

On Peach Root

- **FREEDOM**—(Plant Pat. No. 1161). This new, very large, highly colored freestone nectarine ripens in late July, a few days ahead of Quetta. It is red blushed, flesh golden yellow; firm, juicy, good for shipping, canning and home table. Royalty \$1.50 per tree.
- **GOLD MINE**—Large, highly blushed, white fleshed freestone. Excellent for eating fresh or canning. July.
- **GOWER**—Medium sized, white fleshed freestone; yellowish green, with red blush. An early ripening shipping variety. Early July.
- **JOHN RIVERS**—Early ripening, highly colored white fleshed semi-freestone. A good quality, early shipping variety. Mid-June.
- **QUETTA**—Large, highly colored, white fleshed clingstone; an excellent shipping or home canning variety. July.
- **STANWICK**—Green skinned, white fleshed freestone, with blush on sunny side; a good shipping or drying variety and home orchard favorite. August.

ALMONDS

On Peach Root

- **DAVEY**—New university introduction; a heavy bearing, good quality, soft shelled variety. P. with Nonpareil.
- **I. X. L.**—Large, attractive nut with good quality, broad kernel. Inter-sterile with Nonpareil.
- **JORDANOLA**—Long, high quality kernels; soft, light colored shell. Good pollenizer for Ne Plus and I. X. L.
- **NE PLUS ULTRA**—Long, narrow, soft shelled variety. Large, dark kernels. Plant with Jordanola or Nonpareil.
- **NONPAREIL**—Widely planted "paper shell" variety. Long plump kernels; regular bearer. P. with Texas, Ne Plus or Davey.
- **TEXAS PROLIFIC**—Medium sized, good quality kernels; medium thick shell; vigorous and productive. Use Nonpareil for pollenizer.

CHERRIES

- **BING**—Large, dark red, sweet cherry, firm, juicy flesh, popular shipping variety. Early June. P. Richmond, Morello, Tartarian.
- **BLACK TARTARIAN**—Large, dark red, sweet cherry, excellent quality, important shipping variety. Early June. P. Bing.
- **EARLY RICHMOND**—An early maturing "pie" cherry of very good quality. Early June. Self-pollinated.
- **ENGLISH MORELLO**—Popular "pie" cherry. Medium sized, dark red fruits with red juice. Mid-June.
- **LAMBERT**—The last to ripen of the black shipping varieties, sweet and juicy. Late June.
- **ROYAL ANNE**—The leading commercial canning variety, large, light colored fruits with red blush, crispy juicy flesh. June. P. Richmond or Morello.

PEARS

- **BARTLETT**—Skin bright yellow with slight blush, flesh rich, creamy white, leading commercial and home orchard variety. August.
- **BEURRE D'ANJOU**—Large, greenish-yellow, russeted fruit of very good quality, shipping variety. October.
- **COMICE**—One of the best winter pear varieties, yellow skin with red blush, rich, creamy flesh. October.
- **SECKEL**—Medium sized, yellowish-brown, russeted skin, flesh creamy white, excellent quality. Late summer.
- **WINTER NELIS**—Large, round, brown skin and gray russet. Flesh creamy and juicy, late variety and good keeper. November.

QUINCE

- **PINEAPPLE**—Smooth, golden-yellow fruit with white flesh, slight pineapple flavor. For preserves and jellies. September.

APPLES

- **BEVERLY HILLS**—Developed for Southern California's mild winters, medium sized, striped red and yellow, consistent bearer. August.
- **GRAVENSTEIN**—California's leading shipping variety, red striped skin, crisp, juicy flesh, good cooking apple. Summer ripening.
- **JONATHAN**—One of the best known dessert and cooking apples, round, red striped carmine. October.
- **RED ASTRACHAN**—Medium sized, round fruit, pale yellow skin, overlaid red with crimson stripes, flesh tinted red. August.
- **RED DELICIOUS**—Dark red, tapering fruit with "delicious" crisp white flesh. The country's best known apple. November.
- **RED ROME BEAUTY**—Medium sized, deep red, oblong fruit, juicy, greenish-white, fine grained flesh, early bearing. October-November.
- **RED SIBERIAN CRAB**—Small, round, red crabapple, wonderful for jams and jellies. Late summer.
- **TRANSCENDENT CRAB**—Medium sized waxy-yellow striped red fruit, excellent for jelly or preserves. August-September.
- **WHITE ASTRACHAN**—A green summer cooking apple of good quality, does well in interior valleys. July.
- **W. W. PEARMAIN**—Late ripening old favorite of good quality, large, greenish-yellow, excellent for cooking. November.
- **WINESAP**—Medium sized, red dessert and cooking apple, firm, crisp, yellow flesh. December.
- **WINTER BANANA**—Large, yellow fruit with slight pink blush, delicious fresh or in pies. Late summer.
- **YELLOW BELLFLOWER**—Oblong, yellow fruits with slight blush, delicious fresh or in pies; well known market variety. Early fall.
- **YELLOW DELICIOUS**—Large, golden yellow "delicious" variety, crisp, juicy flesh. November.
- **YELLOW NEWTON PIPPIN**—A yellow or green variety good for either eating fresh or cooking; dried commercially. December.

FLOWERING PEACHES

- **ROYAL RED LEAF**—Double, white flowers, dark bronze red leaves.
- **EARLY DOUBLE PINK**—Early double rose pink flowers.

EARLY DOUBLE RED—Early double ruby red flowers.

DOUBLE WHITE—Large double snow white flowers.

DOUBLE VARIEGATED (Candystick)—Large red and white striped flowers.

HELEN BORCHERS—Large double shell-pink flowers.

LATE DOUBLE RED—Later blooming and darker red than the early variety.

FLOWERING PLUMS

HOLLYWOOD—Light pink flowers, reddish-purple leaves, medium sized, blood-red, good quality fruit.

PRUNUS PISSARDI—White flowers, tinted pink, small ornamental tree with deep purple leaves. Good, reddish-purple fruit.

PRUNUS BLIRIEANA—Semi-double soft pink flowers, foliage tinged with bronze.

PRUNUS THUNDERCLOUD—White flowers in great profusion in early spring, bronze-purple foliage that holds color well.

VESUVIUS (Deep Purpleleaf Plum)—Pink flowers and dark purple foliage.

FLOWERING CRABAPPLES

BECHTELS—Small, bushy tree, covered with double, soft, rose-pink flowers in spring.

FLOWERING NECTARINE

AZALEA FLOWERED—(Alma Stultz). This unique flowering tree has just been released for general planting, and is still very limited in supply. The flowers are large, two or two and one-half inches in diameter, with the petals beautifully waved or undulated, and remind one of azalea blossoms. The color is a delicate rosy white shading to deep pink at the base of each petal. This color deepens as the flower ages. The blossoms are deliciously fragrant and one small spray will perfume a whole room. They are produced so thickly on the tree as to almost completely hide the branches. Orders for trees now being booked for delivery after January 1, 1958. Large, bare root trees, \$3.50 each.

FIGS

BLACK MISSION—Large, pear-shaped, black fruit with purple bloom, strawberry colored pulp, fine flavor.

BROWN TURKEY—Large, elongated, purple-black fruit with strawberry colored pulp.

CALIMYRNA—Large, onion-shaped fruit, greenish-yellow skin, light-strawberry pulp. Requires caprification.

KADOTA—Medium sized, yellow fruit with amber pulp; best commercial canning variety. A good drying variety.

WHITE ADRIATIC—Medium sized, green fruit with strawberry pulp, very productive, good drying variety.

PERSIMMONS

FUYU—Round, firm, orange-red fruit, non-astringent; may be eaten like an apple whenever sweet enough. Late fall.

HACHIYA—Large, pointed, bright orange-red fruit, sweet, rich flesh, astringent until fully ripe. Late fall.

POMEGRANATES

- **WONDERFUL**—Large, bright red fruit, juicy, rich, red kernels; the leading commercial variety. October.

PECANS

- **MAHAN**—Exceptionally large, long nuts up to 2½ inches, paper-thin shell, plump, rich kernels. Excellent shade tree.
→ **SUCCESS**—Large, soft-shelled, heavy-bearing variety; a good variety for the interior valleys.

WALNUTS

- **EUREKA**—Large, upright tree, elongated nut with well sealed, thick shell, creamcolored kernel; excellent shade tree.
→ **FRANQUETTE**—Leading commercial variety, elongated, pointed, light-colored, thin, well sealed shell; good quality meat.
→ **HARTLEY**—Large, good quality, light-colored kernels. An exceptionally early-bearing variety, hence its commercial importance.
→ **PAYNE**—Trees bear early and heavy; oblong nut with medium-thick shell, good quality meat.
→ **PLACENTIA PERFECTION**—For coastal areas and Southern California. Medium-sized, with smooth, thin shell, light tan meat.

ARMSTRONG'S PATENTED TREES

- BOBOLINK** Peach (Plant Pat. No. 1150). Medium-sized, yellow-fleshed freestone, yellow skin with red cheek. July.
CURLEW Peach (Plant Pat. No. 651). Large, deep orange-yellow fruit, blotched red at pit; a good late freestone. September-October.
FLAMINGO Peach (Plant Pat. No. 661). Large, firm, clear, yellow fleshed freestone, smooth skin, marbled crimson. August.
GOLDEN BLUSH Peach (Plant Pat. No. 473). Large, yellow fleshed freestone, golden-yellow skin with red blush. Early August.
MEADOWLARK Peach (Plant Pat. No. 528). Medium-sized, yellow fleshed, semi-freestone, bright red blush. Late June.
REDWING Peach (Plant Pat. No. 621). Rich-flavored, white fleshed freestone, red coloring over creamy skin. Early July.
ROBIN Peach (Plant Pat. No. 529). Early, white fleshed, red-cheeked, semi-freestone; medium sized commercial variety. Early June.
SATURN Peach. (Pat.). For fruit and flowers. This new, dual-purpose, fruiting-flowering peach exceeds anything of its kind yet developed. Saturn combines big, double, pink blooms with high quality, yellow fleshed peaches, juicy and rich flavored.
SPRINGTIME Peach (Plant Pat. No. 1268). Medium-sized, white fleshed, semi-freestone, skin mottled red. May. The first Peach to ripen.
PANAMINT Nectarine (Plant Pat. No. 1100). Large, round, red overlaid on orange fruits, rich, golden-orange flesh. July.
PIONEER Nectarine (Plant Pat. No. 787). Large, delicious, yellow fleshed variety; skin deep orange overlaid with red. Late July.
SILVER LODE Nectarine (Plant Pat. No. 1023). Large, white fleshed variety; creamy white skin overlaid with scarlet. Early June.

REEVES Apricot (Plant Pat. No. 693). Large, round, orange-yellow fruit with rosy blush. Royal for pollenizer. Early June.

SIERRA Plum. (Pat.). Armstrong considers this the best new plum in 25 years; combines the best qualities of Inca and Santa Rosa. Clear, amber flesh; skin heavily mottled with rich red and overlaid with purple bloom. Juicy and rich flavored.

OLIVE TREES

MISSION—One of the best known varieties in California, having been introduced by the Spanish Padres. Handsome, fast-growing tree. Fruit medium large, excellent for pickling and the best of all for oil.

MANZANILLO—This variety leads all others for commercial pickling in California. Also fine for oil production. Tree is a little slower growing than Mission and does not quite attain its large size. Foliage small and dark green, making a beautiful ornamental. Fruit ripens in October, a little ahead of Mission.

SEVILLANO—(Queen Olive). For pickling and stuffed olives. Fruit extra large; pit of good size and clinging; skin bluish-black; flesh solid, good grain and flavor when properly pickled. October.

ASCOLANO—Very large fruit of greenish white color before turning black. Excellent for green pickling. Bruises easily, must be handled carefully in picking. Usually a good bearer, but not as consistently as some other varieties. Most extensively planted in Tulare County.

AVOCADO TREES

DUKE—Ideal for interior valleys, oval green fruit, smooth clear, mild flesh, poor bearer in coastal regions, makes a fine large shade tree. September-October. 22°.

EDRANOL—The dark green, pear-shaped fruits have a marvelous flavor — rich and nut-like. The flesh is smooth and buttery. The tree is a slender, vigorous, upright grower. This variety does best in the interior regions. Starts to bear when young, and continues to bear heavily each season. Ripens May to August. Hardy to 26°.

FUERTE—Leading commercial variety, green leathery skin, pear-shaped fruit, creamy yellow flesh, makes a fine spreading shade tree. Winter ripening. 24°.

JALNA—A thin-skinned Mexican variety with green, pear-shaped fruits of splendid quality. Sometimes bears heavily when only 2 or 3 years old. Quality and flavor excellent; tree spreading and symmetrical. November to December. 22°.

MEXICOLA—The hardiest avocado, small, oval, thin skinned, black fruit, excellent quality flesh, heavy bearer. August-September. 19°.

RYAN—Medium sized, pear shaped green fruit of good quality, a heavy and consistent bearer, summer ripening. 26°.

ZUTANO—The fruit is light green, resembling Fuerte, averaging about 9 ozs.; pear-shaped and with a comparatively thin skin, and fine, rich, nut-like flavor. Seems to bear consistently and heavily in all locations. Fairly new but shows much promise. Ripens November to January. 26°.

CITRUS TREES

ORANGES

- **ROBERTSON**—This variety ripens about two weeks in advance of Washington Navel, which it resembles in appearance. Considered not quite as good quality. It bears fruit at a very early age, and for this reason is favored for home orchard use. However, because the tree is dwarf in tendency, it is not now in favor for commercial planting.
- **WASHINGTON NAVEL**—November-April. Most famous of all citrus. Best eating orange. Good packer and shipper. Widely planted in Southern and Central California.
- **VALENCIA**—April-October. Famous for its juice and very popular in California. Bears very heavy crops.

LEMONS

- **EUREKA**—Bears year around. Tree good grower and prolific bearer. Widely planted in Southern California and along the Coast, where it does better than in Central California.
- **LISBON**—September-March. Very resistant to frost. High quality fruit. Extensively used in commercial plantings, and is particularly popular in the hot, interior valleys.
- **MEYER**—Bears year around and at an early age. Large, orange-colored fruits, fine appearance. Not grown commercially but very popular for home use.

GRAPEFRUIT

- **MARSH SEEDLESS**—December-August. Tree strong, vigorous grower and heavy bearer. Seedless and of fair to good eating quality, depending on where it is grown. Best quality in desert areas, or on adobe soils.
- **RUBY**—(Also called Pink Grapefruit). December-July. Flesh is very decided pink. Exceptionally fine for juice and salads.

TANGERINES

- **ALGERIAN**—December-March. Tree a compact, upright grower. Quite ornamental and very prolific. Fruit larger than Dancy; increasing in popularity.
- **DANCY**—January-May. Tree a strong, upright grower and heavy bearer. Fruit medium, flattened and very highly colored. Flesh dark orange and very juicy.
- **SATSUMA**—(Owari). Trees semi-dwarf. Japanese type orange grows in clusters. High in quality, fruit ripens October-March. Skin very thin. Exceptionally fine for hand eating and juice purposes. Has glossy, bright green leaves.

MISCELLANEOUS

- **SAMPSON TANGELO**—February-May. Fruit golden yellow. Has taste of grapefruit and sweetness of tangerine. Tree very vigorous, upright grower.
- **KARA MANDARIN**—January-May. Tree very productive, of good size and excellent quality of fruit. Fine for juice and hand eating.
- **BEARSS' SDLS. LIME**—June-August. Fruit size of small lemon, very thin peel, abundance of juice of the true lime flavor.
- **MEXICAN LIME**—Bears throughout the year with heavy crops. Tree slow grower, quite thorny and very tender to frost.
- **NAGAMI KUMQUAT**—Tree of dwarf bushy habit. Enormous bearer, retains its small golden-yellow fruit for months. Planted mainly for its ornamental appearance.

SHADE TREES

FRUITLESS MULBERRY—Very fast growing, handsome, spreading shade tree, pest-free, dark green foliage that hangs on until late fall. 35 ft.

MODESTO ASH—Medium-fast growing, exceptionally clean, medium-sized shade tree, foliage drops over short period, beautiful, yellow fall color. 35 ft.

EUROPEAN SYCAMORE—Very fast, tall-growing graceful shade tree, may be pruned heavily and forced laterally to shade larger area. 60 ft.

SILVER MAPLE—Medium-fast growing shade tree, does well in most California locations, beautiful autumn colors. Likes lots of water. 60 ft.

EUROPEAN WHITE BIRCH—Graceful, white-barked, picturesque tree, excellent in groups in lawn for accent. 30 ft.

CHINESE ELM—Exceptionally fast - growing, spreading shade tree, very resistant to heat and drought, dark green foliage. 50 ft.

LOMBARDY POPLAR—Tall and slender, for windbreaks, driveways and tall borders or for special landscaping effects. 50 ft.

BALM OF GILEAD—A rapid-growing poplar with large, spreading head, dark green foliage, thrives anywhere. 40 ft.

CAROLINA POPLAR—Fast - growing, spreading poplar, makes a very quick shade, thrives anywhere. 40 ft.
